SAVE OUR COAST

saveourcoast.org.au

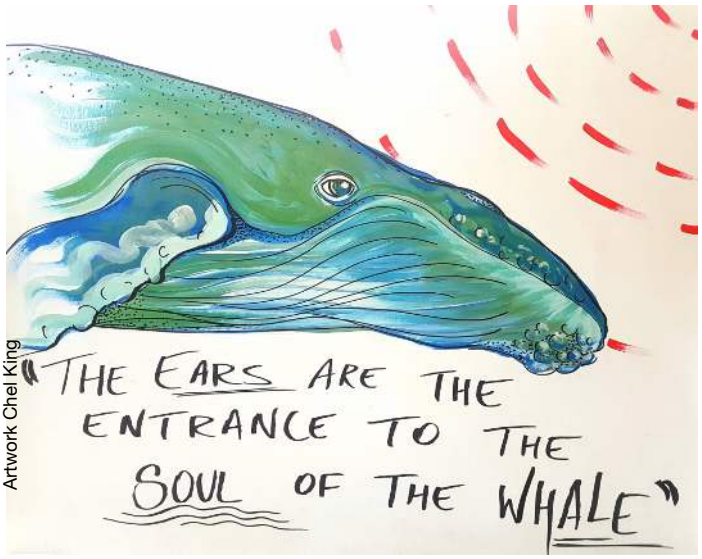

Did you know 3D SEISMIC TESTING (underwater BLASTING for oil or gas) is being planned for 1000 square km of our coast to find the best drilling targets for a gas field (2/3 of our gas is shipped overseas), in PEP 11 (petroleum exploration permit 11, 4,500 square km of ocean from Manly to Newcastle.)

Did you know seismic blasts can be between 200-256 decibels, are fired every few seconds for 24 hours continuously for days or weeks on end, have been shown to kill plankton over 1km away, and can deafen, stress, injure and cause death in our precious marine life?
